“Veranda” is a distinct variety of St. Augustinegrass characterized by its unique pedigree, good shade tolerance, and high turf quality. Veranda resulted from the F-1 cross between MSA-10 and Seville. This new variety provides an excellent appealing uniform, dense, dark green turf at locations where other St. Augustinegrasses are weakened by excessive shade and disease injury.

Advantages and Characteristics

- Fine leaf texture
- Good fall and winter color
- Excellent low seedhead ratings
